## Company introduction

Jiangsu CHANEN massage chair Technology Co., Ltd. is a high-tech company dedicated to the development, production, sales and service of intelligent massage chair and Internet of things sharing massage chair. The predecessor of the company was established in December 2018, and the R & D center and factory are located in Huaian Economic and Technological Development Zone. It is planned to invest 150 million yuan in three years to build a first-class massage chair R & D center and production base in China. Continuous innovation is the core value of CHANEN, and it is also an important reason for CHANEN to maintain its advantages. CHANEN has a strong R & D team, manufacturing team and marketing team. They do not stick to the existing product and service mode of massage appliance industry, closely combine "brand innovation", "service innovation" and "cultural innovation", constantly seek innovation and change in their work, create new technologies, new products and new services, lead the new trend of modern life style, and innovate with originality to optimize the quality of life in an all-round way.

The company plans to build a modern chemical plant with an annual output of 100000 intelligent massage chairs, including finishing workshop, injection workshop, electronic inspection and assembly workshop, fabric design and processing workshop, general assembly workshop, inspection workshop, unmanned intelligent warehouse, etc.

The company's products have been obtained CE, KC and other international certification, business has been expanded to South Korea, Spain, Australia, Vietnam, the United States and other regions. Domestic business has covered South China, central China, East China and southwest China. The company has established long-term stable cooperative relationship with many retailers and agents. The company sells massage chair and other products with complete range and reasonable price. Our company has strong strength, pays attention to credit, Compliance with contract, guarantees the product quality, and wins the trust of the majority of customers with the principle of multi variety operation characteristics and small profits and quick turnover.

## Quality control system

Our company has established a sound quality management system to ensure the stability and reliability of product quality. The quality management system includes quality policy, quality objectives, quality manuals, program documents and quality records.

We follow ISO9001 quality management system standards, and conduct regular internal audits and management reviews to continuously improve the level of quality management.

## Quality control process

### Raw material procurement and inspection:

- Supplier evaluation and selection
- Raw material inspection

### Production process control:

- Process monitoring
- On-line detection
- Equipment calibration and maintenance

### Finished product inspection and testing:

- Ex-factory inspection
- Performance test
- Identification and traceability of finished products
